**FOR IMMEDIATE RELEASE**

## **LogiSync and Sloan Valve Recognized by Smart Business Network for Green Building Restroom Management Solution**

**AVON, OH (February 20, 2008):** LogiSync, developer of customized embedded communication solutions, and Sloan Valve Company, the world's leading manufacturer of water-efficient plumbing systems, will accept the Smart Business Network Evolution of Manufacturing Honorable Mention Award at the 2008 Innovation in Business Conference. The pair is being honored for their collaborative effort in developing the Sloan Monitoring System™ (SMS), a green solution for building restroom management.

The Evolution of Manufacturing award was developed by the Smart Business Network and the Manufacturing Advocacy & Growth Network (MAGNET) to recognize Northeast Ohio manufacturers that demonstrate excellence in adapting to a global economy. The SMS assists global initiatives targeted at conserving valuable natural resources by reducing and limiting the use of energy and water in commercial restrooms.

“The Sloan Monitoring System is the world’s preeminent solution for commercial restroom and water management systems and was a logical outgrowth of the technology originally developed to deal with the special problems of penitentiary plumbing systems,” said Ed Yenni, president of LogiSync. “LogiSync is proud to have developed the SMS with Sloan Valve, a company with a history of delivering innovative products to the marketplace since 1906.”

The technology combines embedded systems technology with market-leading, high efficiency restroom products to monitor and control restroom fixtures such as faucets, soap dispensers, urinals, and water closets. It also provides real-time information for water management, predictive maintenance, early warning of critical system failure, and support of efficient resupply activities.

The award will be presented on February 28, 2008 at 7:00pm at MAGNET Innovation Center in downtown Cleveland. A feature story on both LogiSync and Sloan Valve will be published in the February Cleveland and Akron/Canton issues of *Smart Business*.
